KILKENNY®
KWIK STEP

The Builders Choice
in Prefabricated External Stairs

The only
Pre-Fab stair kit
made for both
Domestic &
Commercial use

EASY TO ASSEMBLE

KWIK-STEP pre-fabricated external stairs are 900mm wide with a rise of 160mm between each step.

All Kwikstep are supplied with routed and pre-drilled stringers, screws and treads packaged for ease of storage, handling, assembly.

All you require is a power drill and your done.

Kwikstep is the only pre-fab, pre-drilled, routed stair kit that complies with the Building Code of Australia as well as the Australian Standard AS 1657.

That's why our treads are Reeded to a 255mm depth.

SPECIAL ORDERS

Kilkenny can manufacture customised **KWIK-STEP** to suit any requirements.

Our special order forms are available from your reseller to enable us to manufacture to any width to your specifications.

All we need is your total rise height from ground level to deck level, the required width of your staircase, whether you would like treated pine or merbau. A prompt costing will be supplied and specialist advise is available anytime.

KWIK-STEP are easy to assemble and ready to install.....however taking care of your Stairs is important to you and important to us!

Your **KWIK-STEP** stairs are made from timber, being a natural product it has a tendency to discolour from weathering.

Make sure before you open up your new **KWIK-STEP** stairs – please store them in a suitable place away from the natural elements so that you will not be disappointed with the product!

It is our recommendation as soon as you install your stairs (or have your **KWIK-STEP** stairs installed) that you apply a suitable stain, oil or paint (or similar). This will minimise splitting, cracking and weathering.

There is no doubt **KWIK-STEP** stairs are easy to install and put together yourself; however it is our advice that you seek professional assistance from a qualified person to ensure that you are conforming to all Australian Building Codes!

Our stairs are not a self supporting product and need to be attached suitably and securely to a building or structure before use.
